(+31) 0629046945 | abdallah1012@outlook.com | [Comprehensive CV abdallah1012.gitub.io](https://github.com/abdallah1012)

Education

- American University of Beirut** - Computer and Communications Engineering Sept 2017 – June 2021
Bachelor's degree with 3.45/4 GPA, Dean's Honor list and graduated with distinction.

Work Experience

- Adyen - Software Engineer** April 2023 - Present
Self-driven work and ownership of code. The primary role is to ensure continuity of the platform, add features and improve performance.
 - ❖ Developed and maintained a feature framework. Designed slow rollouts, autonomous release deployments and a testing framework for features in unit/component/integration tests. This introduced a new standard of safe testing and rollout across the company for incident prevention and fallback measures.
 - ❖ Developed and maintained an ID leasing resource pool with context awareness and uniqueness criterias. This includes unique resource pools between datacenters with thousands of services relying on it for weekly deployments.
 - ❖ Developed and maintained a secrets manager store with security measures, secret generation (RSA, ECC and more), certificate generation, with standardized mechanisms for staging, versioning and rotating.
 - ❖ Developed and maintained a service discovery mechanism for communication between internal/external applications with authentication measures and mechanisms to penalty box services based on different contexts.
 - ❖ Lead an end to end migration of a critical service responsible for encryption/decryption from using an old in-house built network framework to a new http based communication framework leading to 20% reduced latencies and better logging visibility.
 - ❖ Onboarded four new team members by creating comprehensive documentation of the team's services and internal processes as well as leading training sessions.
 - ❖ Revamped service monitoring and alerting, reducing mean time to detection (MTTD) by 50%-99% and maintaining 99.99% availability and latency across critical flows.
 - ❖ Spearheaded a migration of services using a centralized configuration database to isolated databases per service that lead to faster processing times in the migrated services and the non-migrated services. This migration and its documentation was adopted by other teams to migrate their own services.
- SGS Brightsight - Code Reviewer Security Evaluator** Aug 2022 - March 2023
Conducted a thorough review of the client's application code for vulnerabilities, including oracle attacks, fault injection, and documented findings in detailed reports.
- Murex Services SAL – C++ Software Engineer (Main Role) – Scrum Master (Side Role)** June 2021 – July 2022
Utilized Test-Driven Development (TDD) or Behavior-Driven Development (BDD) to plan and develop features, including unit testing. Managed risks and ensured team adherence to AGILE principles in addition to technical responsibilities.
- HotelMap – Python Software Developer** Dec 2021 – Feb 2022
Developed a pagination feature for an existing web scraping tool for events using Python.
- Inspire Business Consult – Software Development Intern** May 2020 – July 2020
Developed an interface for communication between a bank's software and a remote database using Java and SQL.
- American University of Beirut – Teaching Assistant** Nov 2018 – Feb 2019
Assisted lab instructor in an introductory programming course to teach C++ and MATLAB concepts to students.

Research Experience:

- Natural Language Processing Research** Jan 2020 – Jan 2021
Parsed large text datasets and created complex regex expressions to manipulate data and create custom word vectors using various APIs (DISCO, FARASA, SPACY, WORD2VEC). Developed machine learning models for text classification and managed a relational database using MySQL to extract relevant data and input model output.

Project Experience:

- **Final Year Project:** Developed a cryptographic solution to prevent "relay attack" vulnerabilities in EMV contactless smartcard payment systems using physically retrieved data, without significantly modifying the existing architecture.
- **AES Encrypt/Decrypt Calculator:** Designed an application using Python and PyQt which takes a text and a key to output the steps taken by the AES algorithm to generate the final encrypted (or decrypted) text.
- **Airport Reservation System:** Developed an application that implements a parking reservation system for pilots using a multi-threaded client-server architecture using Java, JavaFx and MySQL.
- **Cinema:** Developed an application using PyQt5 and MySQL that implements a platform for professors to upload videos and receive feedback from students who can enroll in courses, watch videos and give feedback.

Skills

- Technical Skills:
 - o Languages: Java, Python, SQL, C++, JavaScript, PromQL, Bash
 - o Architecture & Backend: Relational Databases, Caching & Queues, API paradigms
 - o Infrastructure & Devops: Containerization, (docker), orchestration (Nomad), CI/CD
- Languages: English (Fluent), Arabic (Native), French (Basic)
- Soft Skills: Other: Team Coordination, Critical Analysis, Perseverance, AGILE, SCRUM

Extracurricular Activities:

- Volunteered at “Ajialouna” NGO helping organize rations and cloth then distributing them.
- Delegate and Advisor in the Model United Nations Conference for years 2015 and 2016 respectively.
- Participated in several Movie Making, Speech and Physics contests.
- Volunteered yearly in various activities in Amsterdam in either cleaning parks or helping maintain gardens
- Recreational bouldering (indoor and outdoor) and participating in team bouldering competitions.
